## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3, 5-8 and 10-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eizenhoefer (US Patent No. 5,119,801), hereinafter Eizenhoefer ('801), of record, in view of Hagood (US Patent No. 5,869,189), hereinafter Hagood ('189), of record.

Eizenhoefer ('801) teaches a medical shock wave apparatus comprising piezoelectric fibers integrated in a material in a lengthwise direction between respective electrical terminals, a voltage source connected to at least one terminal, a coupling membrane defining a volume filled with a shock wave transmission fluid between the fibers and the membrane, a curved planar carrier having a conductive portion coupled to multiple modules of fiber, the modules including fibers with a common electrical contact, wherein the modules are controllable as a module group (Fig. 1, col. 2 line 62 – col. 3 line 55). Eizenhoefer ('801) does not expressly teach the material to be composite. In the same field of endeavor, Hagood ('189) teaches a medical ultrasonic transducer wherein multiple piezoelectric fibers are integrated in a composite material (col. 2 lines 1-10). It would have been obvious to one of ordinary skill in the art at the time of invention to have substituted the composite material of Hagood ('189) for the material of Eizenhoefer ('801), as a skilled artisan would expect the apparatus of Eizenhoefer ('801) to work equally well with a composite material, and such modification would require nothing more than the mere combination of known prior art elements to yield predictable results, which has previously been held as obvious and unpatentable (*KSR International Co. v. Teleflex Inc.*, 82 USPQ2d 1385).

### *Response to Arguments*

3. Applicant's arguments filed 5 November 2008 have been fully considered but they are moot in view of the new grounds of rejection.

Art Unit: 3737

4. Applicant's amendment filed 11/5/08 is sufficient to overcome the previous objection to the title, the previous claim objections, and the previous rejections under 35 U.S.C. 112, which are hereby vacated.

***Conclusion***

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
